## LETTER OF RECOMMENDATION

As a Precast Concrete Manufacturer, we battled daily at the end of each day's production, with time-consuming and abrasive cleaning and maintenance procedures in order to clean our concrete mixers of cement and concrete build up. We then heard about NanoWork's Industrial Low Maintenance ETC (Easy-to-Clean) coatings and at first tried Nanoworks' AutoGuard product on one of our machines, after which application we now only clean the mixer with water from a hosepipe - in no time. No chemicals and no abrasive methods necessary anymore.

When buying a new machine in 2018, Nanoworks suggested that we use their Premium MetalGuard product instead, which is an industrial strength Non-Stick ETC coating more suitable for our application. So we treated our brand-new machine with Premium MetalGuard to protect it against concrete build-up. This machine is now 7 months into production and is still in perfect condition with no concrete build up. Cleaning is done with a hosepipe only.

We can most definitely recommend NanoWorks Premium Range of Industrial ETC coatings. From our point of view, NanoWorks MetalGuard is an amazing product to protect paint and make cleaning a quick and easy task. Our use of NanoWorks' Premium MetalGuard saves us many hours of cleaning time daily and our machines looks wonderful.
